PHOSPHATE BILL STIRS UP WRATH

Mondell Bill Before Congress Condemned by the Local Phosphate Interests.

BILL IS DECLARED EVIL AND ILLEGAL

Would Place Phosphate Beds Solely Under the Placer Mining Laws.

Western phosphate circles are pretty thoroughly wrought up over what is known before congress as the Mondell bill. This bill has been reported favorably by the public lands committee. and it provides, strange to say in these days of conservation of the public re sources, that hereafter phosphate lands shall be under the placer mining laws. If does not take a very deep look into this matter to discover that under the placer laws the phosphate lands of Utah, Wyoming and Idaho soon will be covered by locations, or that much of

covered by locations, or that much of it left open for entry, and at a great loss to the government.

Under the existing statutes, say local experts, the phosphate beds of the three states above mentioned are not subject to placer location, but to lode locations. The federal statutes provide that any mineral bearing formations in place are to be located by inde claims, and not by placer. These deposits are described as being positively in place, being in bedded years with well defined walls.

Under what is known as association placer locations, it takes only eight names to secure a placer claim comprising 160 acres. The government secures only \$2.50 per aere, and it only takes \$500 worth of work to secure a patent on the entire 160 acres. Under a lode location, the government gets \$5 per acre, and its takes \$500 worth of work to secure a patent with the location of the present the secure as a secure to the secure a patent on just tweety acres. secure a patent on just twenty acres is evident, therefore, that the less agish way of proceeding, and the one all emphasizes the president's theories renservation of resources, is by lode ations, and the advocates of lode lougs in Utah Wyoming and Idaho ounce the Monde'll bill without re-

ation, of the policy provision of the left bill, which brings it into the bill legislation. class, is the remainder of the provision that the entryman shall limber gights beyond the perpendicular ha provision that the optryman shall limb rights beyond the perpendicular of all his claim. Thus from one class of all of the cations of the industry, are apex to be included and the vertical line cations is retroactive, for if all locations is retroactive, for if all locations is retroactive, for if all locations is reason the only interests to suff to reason the only interests can be from this section of the hill. The hill present lode claim owners, pathetes a provides, Washington disputed of the provides washington disputed of the by placer et lode locations shall be pleted in the order of their placer location of the abstract location of the same. It is apparent that the locations are the provided and provided locations are theory and price relative to the construction of the stone resources, and now costs \$30 r acre to prove and patent phospha dode leasms it costs but it is provided that the provided har a line less lode flaims it costs.

now costs \$30 acre to prove and patent phosphal ode claims it costs but a bit less u \$6 per acre for placer claims at the stand dimensions from covernmental standpoint. You Wille Glad If you see us ab that wall paper and painting. Newbods and the best of workmen.

NO ASSESSMENT BY THE COLUMBUS CON.

Sigh of Relief by All Interested in This Alta Company.

Now that the smoke created by the recent engagement has been dispelled, and stockholders are gathering themselves together once more for the homeward march, the officials of the Columbus Consolidated company are agreed on the campaign of development work and general procedure for the coming year. The Wednesday meeting of the directors, at which matters of company importance were thoroughly flavel over, closed without any action being taken in regard to an assessment, a matter that created no small concern for several days prior to this session.

As is well known, the extensive cam-paign of development work the com-pany was forced to carry out a year or so ago, and the hard fight made last summer with the breaking pumps and floods on the fourth level, left the orroods on the fourth level, left the or-ganization pretty well in the hole finan-cially, and there were some who thought the assessment route the only one to bring immediate relief. But the di-rectors believe that it will not take long to wipe the debt off the slate by ore shipments, so the management will crowd to the market every ton of rock crowd to the market every ton of rock possible to this end. As the property now is in the best physical shape it bas been in for over a year, there is reason for those interested to look for-ward to the remaining months of the year with confidence.

DALY-JUDGE AND THE DALY FISSURE

Drain Tunnel Develops Water Flow as Well as Much Fine Ore.

CAN NOW DEVELOP ON LOWER LEVELS

Famous Mineral Vein Shows Great Promise in Bonanza Flat Territory.

While rumors have been flying for everal days relative to some very gratifying developments in the Daly Judge properties of Park City, no confirmation of the same could be had until yesterday, when General Manager George W. Lambourne, who returned from the east several days ago and who came in from Park City Wednesday evening, was found by The Tribune in his local office.

Mr. Lambourne stated that for some time past the Daly-Judge management has been extending the company's drain tunnel out into the Bonanza Flat section of the property, the tunnel paralleling the Daly fissure. The tunnel level is the 1200-foot level of the mine. and the working was extended out into the limestone to ascertain if sufficient water could be handled in order to al-

the limestone to ascertain if sufficient water could be handled in order to allow development work on this fissure on the 1400 and 1500-foot levels. This point has been positively determined, and a flow of water amounting to 150 gullons a minute has been developed. In four or five places the management has crossent over to the Daly fissure. It has been thought all along that the ore bodies, which make up and down rather than parallel with the fissure, would hardly be strong enough to push their way up into the lime, and that it would be necessary to go down into the quartizite in order to find the resources. But this theory has been shown wrong to the extent that the ore does push its way into the lime, for crosscuts, three in number, have developed ore. In one crosscut, states Mr. Lambourne, there is a seam of high-grade ore that is being explored at present. The second crosscut that the splendid milling ore, while a drift has penetrated the ore so far for fifty or sixty feet. The third crosscut, a few days ago, developed four feet of what he terms a fair grade of shipping ore, all three places being full of better promise as work proceeds.

So, while the main object was to develop and handle the water so as to allow development work to proceed on the lower levels, the company has accomplished in addition to this the open.

allow development work to proceed on the lower levels, the company has accomplished in addition to this the opening of resources that demonstrate the Daly-Judge properties are barely scratched for their orce. In the past it has been impossible to work much on the 1400 and 1500-foot levels, and as only a short distance separates the workings from this Daly fissure the next few months can be looked forward to with the utmost confidence for big results.

ward to with the utmost confidence for big results.

The significance of this latest devel-opment lies in the fact that this is absolutely virgin territory, and that the company's own drain tunnel is ea-pable of doing the work of handling the water, that has been a trouble-some matter heretofore. It is also im-portant for it is the first time that any development work of any conse-quence has been done on the Daly fis-sure, one of the most famous avenues of wealth in the country. It was from of wealth in the country. It was from only 1500 feet of this fissure that the Daly company extracted over \$9,000,000 only 1500 feet of this ussure has the Daly company extracted over \$9,000,000 worth of ore, and from which the Ontario and Daly West companies took out many millions of dollars more of mineral wealth. The fissure extends across the Daly-Judge territory for two miles at least, the eroppings being plainly exposed for that distance. It can be said, therefore, that the Daly-Judge management has just recorded the most important disclosure ever made on its ground, and the officials naturally feel greatly encouraged over these results. As stated by one prominent stockholder yesterday:

'These facts prove that the Daly-Judge properties are full of wonderful opportunities, and that the company need take its hat eff to no other proposition in the country. It is highly significant that the company can take eare

nificant that the company can take eare of the water in its drain tunnel that has caused no end of delay and diffi-culty throughout the history of the or-ganization.

Daly West Stockholders

Not being able to obtain a stockholders' list we are compelled to again appeal to you through the public press.

Mr. Herman Bamberger, a brother of the president of our company, has taken it upon himself to defend the present administration and to criticise the resolutions adopted on January 25, at a representative meeting of the Cincinnati stockholders. We think the indorsement of both the president and general manager would probably sound better if coming from the pen and lips of some one who is not your brother and uncle.

Why is it that this gentleman, who introduces himself to you simply as a resident of Utah and living close to the Daiy West mine has possession of facts in regard to Daiy West far in excess of what is known to the stockholders who own the property? We believe we are justified in stating that the Daiy West atockholders are looking for neither charity nor philanthropy in the administration of their property. What they want and what they are entitled to, is an independent management, and one not identified with that of the Daiy and Ontario mines, both of which are practically worked out, and owned or controlled by the Bamberger interests.

The fact that the Daily West mine was practically opened and nearly all the ore bodies which have produced profits and dividends were exposed before Mr. Bamberger came in charge of the property, does not seem to be generally known. Mr. Daiy, the founder and former president of our mine, in his last official report, of February, 1900, estimated the net earnings of the property for the enauing year at \$800,000. This money should have drawn interest for the last mine years according to the printed reports and statements of the management, has been about \$500,000. This money should have drawn interest for the benefit of all the stockholders. We pledge ourselves that after the reorganization of the directorate, next month, Mr. McCornick, or whoever may be the treasurer next year, will comply with our desires in this matter.

The statement of Mr. Herman Bamberger

it was straining every nerve to earn 50 cents. What was the object of this good record?

Now, a few words about the Daly-Judge mine, which has been persistently drawn into the controversy by the other side. The Daly-Judge mine needs no rights from the Daly West company at this time. It has a drain tunnel of its own that is ample for years to come, and is capable of taking care of itself the same as is the Daly West. Should the time come, however, that it would be desirable for the Daly-Judge mine to have any Daly West drifts extended into its own territory, what harm could come from the extension of such drain tunnels and drifts, provided the Daly West and Ontario mines received a full and proper rental and income from the use of such privileges?

We state again, and most emphatically, that this movement is intended sole-

We state again, and most emphatical-that this movement is intended sole-for the benefit of all Daly West stock-olders, and we appeal to you for your uppear. Support.

Proxies can be obtained from M. D. Joseph, Room 408, Judge building, Salta Lake City, and if you have already given a proxy for the coming meeting, another one to us of a later date will enlist your support in this movement.

H. OTTO HANKE.

WORK RESUMED IN BOSTON-SUNSHINE MINE

Work was resumed last Monday morning in the mine of the Boston-Sunshine company of the Mercur district. On Thursday the local management sent out a car of mining timber. Recently Mill Superintendent Wood stated that development work in the property would not begin until the mill was about in shape to handle the ores, so it is taken for granted that this company's overhauled milling plant is on the verge of beginning its part of the task. There is much interest in this company's efforts, for a new process of gold value saving is to be tried out that is practically a demonstrated success, meaning that what was once a failure in a mining way at Mercur is soon to be counted among the successes.

DEEP CREEK LOOKING FOR FINK SMELTERS

Perfection of Process Means Another North Tintie Volumes to This Part of Mining Utah.

If there is any section of the west that is looking forward with intense interest and anticipation to the perfection | time on the Salt Lake Stock of the Fink smelting process, it is the exchange this morning, a Clifton section of Deep Creek, Utab. That the Fink plant has created no end was approved Thursday after of comment and expectation in the Deen Creek country is vouched for by T. R. Larsen, who, with William M. Lamb and several well known Salt Lakers, is extensively interested in mining properties there. Mr. Larson stated to The Tribune yesterday that ie was interested personally in sixty claims throughout the mineral zone,

some of which are patented and in-corporated.

Mr. Larson is secretary and treasurer of the Boston-Utah company, an organ-ization that has just completed the patenting of several claims of its group. In doing the necessary work the owners developed a vein at good depth, the vein being 110 feet in width and averaging \$25 per ton in silver and lead, with the two metals at their present levels. This property adjoins the Western Pa-

This property adjoins the Western Pacific property, which, in turn, adjoins the noted Western Utah. As for the latter proposition, Mr. Larson bas only words of highest praise, and the whole district is looking forward to the time when this company is producing as befits the merits of the mine.

Interested with Mr. Larson in the Undine and Theodore groups are some prominent local investors. On the former the management has developed a 14 foot vein, which averages 9 per cent copper and \$\frac{1}{2}\$ gold. On the Theodore, the company is drifting on the 50 foot level on a vein eighteen feet wide, the copper average of which is 14 per cent, and \$10 gold. Mr. Larson states that such companies as the Woodman, the Wilson Brothers and others are developing their ground steadily, and are bringing splendid mines to the front. All are awaiting the time of results, which, in the slow march of time, seems very close at hand for this part of neglected but rich Utah. for this part of neglected but rich

Utab.

The Western Pacific railroad has meant unuch to the miners, allowing cheaper transportation for supplies and household goods of all kinds, and it allows a great saving in shipments made to the market to the market.
